

Providing valuable products from valuable people to valuable customers™

UPM® Permanent Pavement Repair Material

UPM Permanent Pavement Repair Material is the high-performance asphalt patching material that is easily applied any time of the year, under any weather conditions. UPM has been tested and refined to the point where it is now the worldwide standard. Over 90% of all patches using UPM outlast the surrounding pavement and Unique Paving Materials Corporation guarantees it in writing.

High Performance = Cost Effectiveness

UPM saves time and money. Since over 90% of all holes patched with UPM never need patching again, money is not poured into the same holes repeatedly!

Easy Application

UPM is quick and easy to apply, with no special or expensive equipment required.

STEP 1 PREPARE

Just sweep the area to be repaired, removing loose debris.

STEP 2 APPLY

Shovel or pour UPM into the hole.

STEP 3 COMPACT

Compact the patch and it's ready for traffic.

Note: Do not seal coat over new patches for at least 30 days (preferably 6 months to 1 year).

Features and Advantages:

- Permanent Repairs - Over 90% of all UPM repairs will outlast the surrounding pavement.
- All Weather Application - Permanent repairs under wet or dry weather conditions.
- Seasonal Grades - Specific formulations to accommodate year-round patching requirements.
- Easy to Use - Apply UPM into the pothole using our 3-step method below.
- Readily Available - No waiting for hot mix in long lines at the plant.
- Emergency Patching - Always ready for repairs 24 hours a day from your inventory.
- No primer or tacking material required.
- Repaired sites can immediately be opened to traffic.

Coverage

10-lbs. per square foot, per inch of depth.

Testing and Formulation

Unique's state-of-the-art laboratory and its chemists analyze local raw materials to determine all relative variables. Upon completion of the analysis, a UPM Liquid Blend is scientifically formulated to match locally available aggregates. Climate and season are also factored into the final equation. Unique's technical engineers use this information to design custom job-mix formulas.

Quality Control

Strict quality control procedures are adhered to throughout the entire manufacturing process to ensure the highest quality. This attention to detail applies wherever, and whenever UPM is produced.

Technical Assistance

Authorized Unique representatives supervise every UPM production to guarantee consistent mix quality. Samples from every production are sent to Unique's laboratory for approval and the privilege to carry the UPM name.

Availability

UPM is produced around the world for local bulk availability. It is also distributed in 55-gallon drums, 50-lb. bags and 5-gallon pails.
